SECTION 2 – ACADEMIC DETAILS

Subject Rationale

Point Location follows from Channel Theory (CMAC111) and introduces additional concepts, TCM knowledge and practical skills. Chinese terminology and basic theory associated with point categories and individual acupuncture points are covered. Students learn how to locate all acupuncture points from the 14 primary channels and common extra (non-channel) points on a human model, using anatomical landmarks and proportional measurements. Students learn actions, indications, contraindications and cautions associated with specific acupuncture points.

Learning Outcomes

1. Define and describe terminology and theory associated with the primary acupuncture points.
2. Demonstrate knowledge and skill in locating acupuncture points from the 14 primary channels and common extra (non-channel) points on fellow students.
3. Define and demonstrate knowledge of point categories, actions, indications, contraindications and cautions related to acupuncture points.
4. Apply point categories, actions and indications to basic Chinese medicine case studies.
5. Apply work, health and safety practices.
6. Evaluate patient individual needs and modify practices showing due respect for privacy, cultural and other differences in line with CMBA Code of Conduct.
